INDEX

S.No.	Program/Objective	Page No.	Remark/Sign
1.	Display Hello World	3	
2.	Display the AppBar Code	4	
3.	Display Stateless and Stateful Widget	5-7	
4.	Display Container Widget	8	
5.	Remove debug banner	9	
6.	Set theme to dark	10	
7.	Display an image	11	
8.	Display screens using Navigation	12-13	
9.	Display scrollview	14-15	
10.	Display Radiobutton	16-18	
11.	Display icon	19-20	
12.	Display different types of button	21-23	
13.	Display List of items using menu	24-26	
14.	Display Login Screen	27-30	

15.	Display Animation	31-32	
-----	-------------------	-------	--

Q1. Write a program to display Hello World in flutter App.

Code:

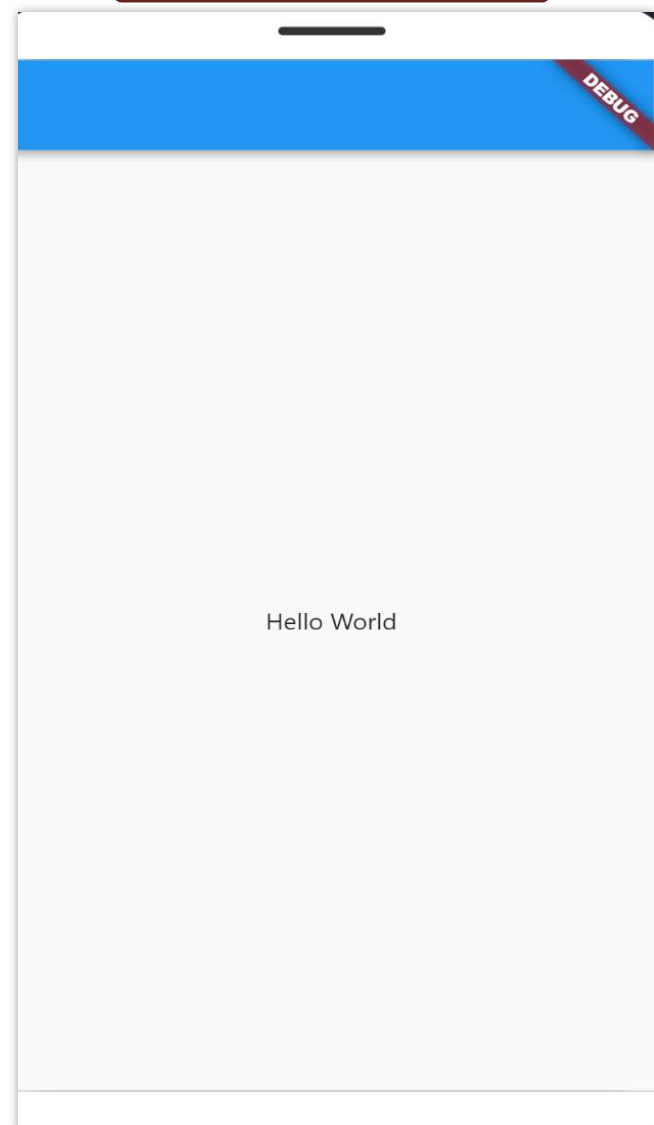

```
import 'package:flutter/material.dart';

void main() => runApp(MyApp());

class MyApp extends StatelessWidget {
  // This widget is the root of your application.

  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      home: Scaffold(
        appBar: AppBar(),
        body: Center(
          child: Text('Hello World'),
        ),
      ),
    );
  }
}
```

OUTPUT:

Q2. Write a program to display the AppBar code in flutter App.

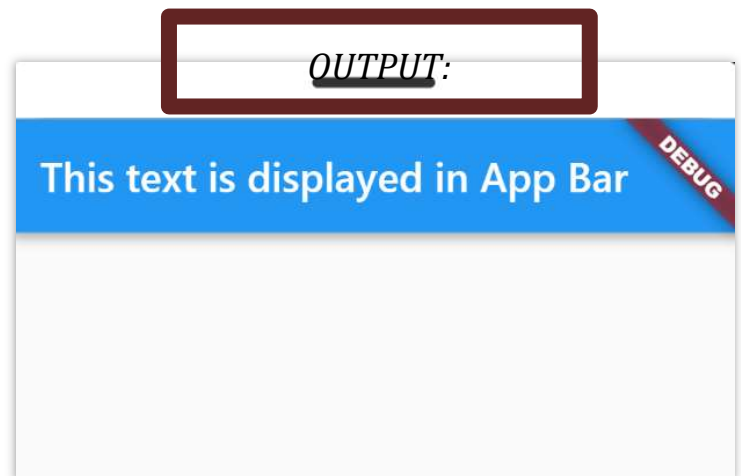

Code:

```
import 'package:flutter/material.dart';

void main() => runApp(MyApp());

class MyApp extends StatelessWidget {
  // This widget is the root of your application.

  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      home: Scaffold(
        appBar: AppBar(title: Text('This text is displayed in App Bar')),
      ),
    );
  }
}
```

Q3. Write a program to display Stateless and Stateful widget in flutter App.

Code: Stateless Widget

```
import 'package:flutter/material.dart';

void main() {
  runApp(MyApp());
}

class MyApp extends StatelessWidget {
  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      home: Scaffold(
        appBar: AppBar(
          title: Text('THIS IS APP BAR'),
        ),
        body: Center(
          child: Text('THIS IS THE BODY'),
        ),
      ),
    );
  }
}
```

OUTPUT:

Stateful Widget

```
import 'package:flutter/material.dart';

void main() {
  runApp(MyApp());
}

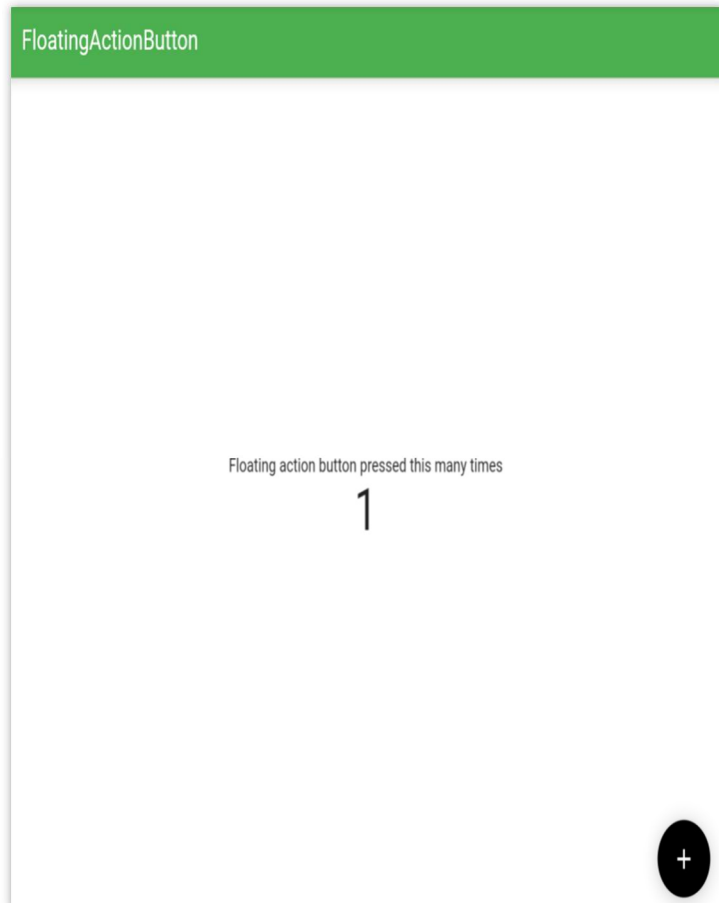

class MyApp extends StatelessWidget {
  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      title: 'FAB',
      home: MyHomePage(),
      debugShowCheckedModeBanner: false,
    );
  }
}

class MyHomePage extends StatefulWidget {
  @override
  _MyHomePageState createState() => _MyHomePageState();
}

class _MyHomePageState extends State<MyHomePage> {
  int i=0;

  @override
  Widget build(BuildContext context) {
```

OUTPUT:

```

        backgroundColor: Colors.white,
        appBar: AppBar(
            title: Text("FloatingActionButton"),
            backgroundColor: Colors.green,),
        body: Center(child: Column(
            mainAxisAlignment: MainAxisAlignment.center,
            children: <Widget>[
                Text("Floating action button pressed this many times"),
                Text("$i",textScaleFactor: 3,)
            ])),
        floatingActionButton: FloatingActionButton(
            child: Icon(Icons.add),
            backgroundColor: Colors.black,
            onPressed: () {
                setState(() {
                    i++;
                });
            }, ), );
    }}

```

Q4. Write a program to display Container Widget in flutter App.

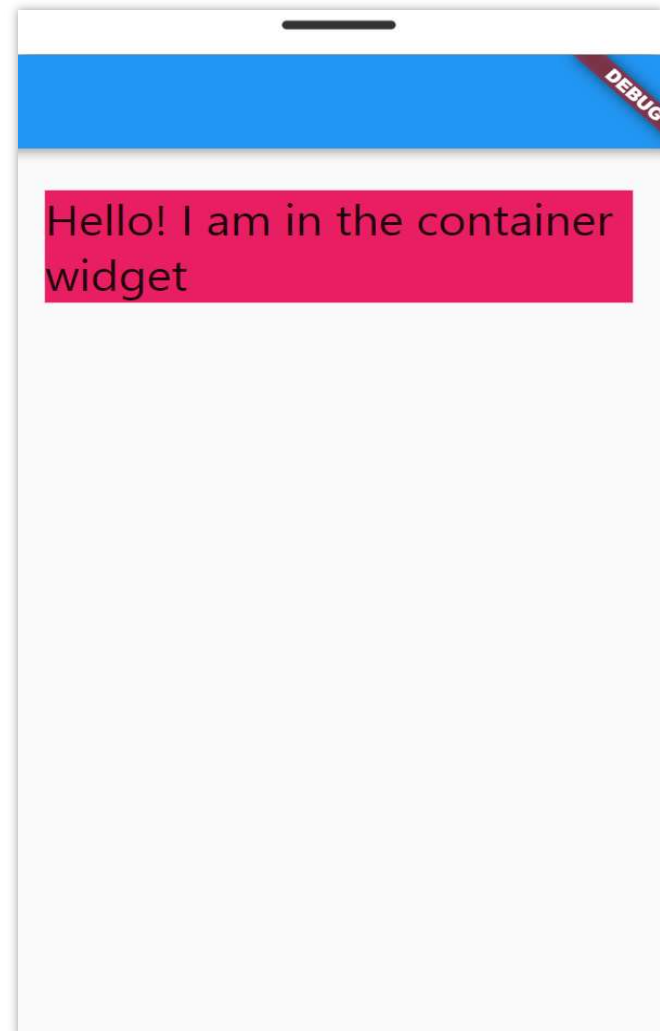

Code:

```
import 'package:flutter/material.dart';

void main() => runApp(MyApp());

class MyApp extends StatelessWidget {
  // This widget is the root of your application.
  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      home: Scaffold(
        appBar: AppBar(),
        body: Container(
          color: Colors.pink,
          margin: EdgeInsets.all(25)
        child: Text("Hello! I am in the container widget",
          style: TextStyle(fontSize: 25)),
        ),
      ),
    );
  }
}
```

OUTPUT:

Q5. Write a program to remove the debug in flutter App.

Code:

```
import 'package:flutter/material.dart';

void main() => runApp(MyApp());

class MyApp extends StatelessWidget {
  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      debugShowCheckedModeBanner: false,
      home: Scaffold(
        appBar: AppBar( title: Text(' MaterialApp Demo Theme ').),),
      );
  }
}
```

OUTPUT:

Q6. Write a program to set theme to dark in flutter App.

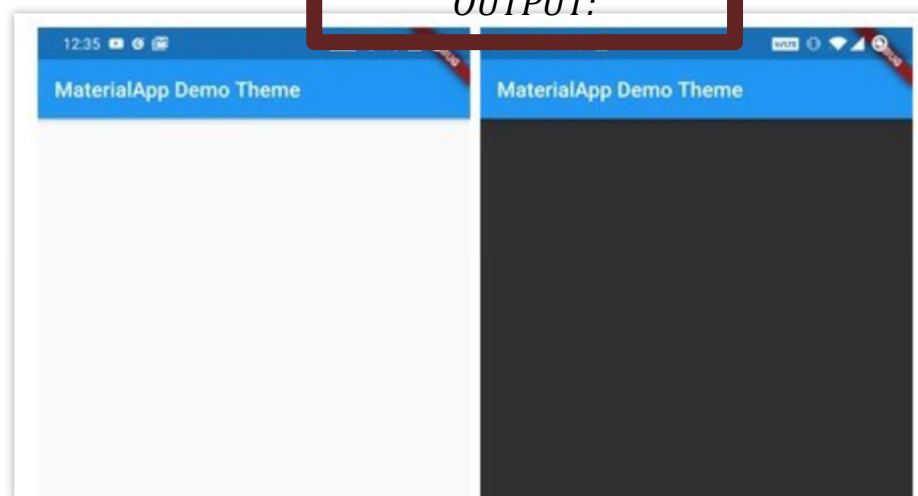

Code:

```
import 'package:flutter/material.dart';

void main() => runApp(MyApp());

class MyApp extends StatelessWidget {
  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      theme: ThemeData(brightness: Brightness.dark),
      home: Scaffold(
        appBar: AppBar( title: Text(' MaterialApp Demo Theme ').),),
      );
  }
}
```

OUTPUT:

Q7. Write a program to display Image in flutter App.

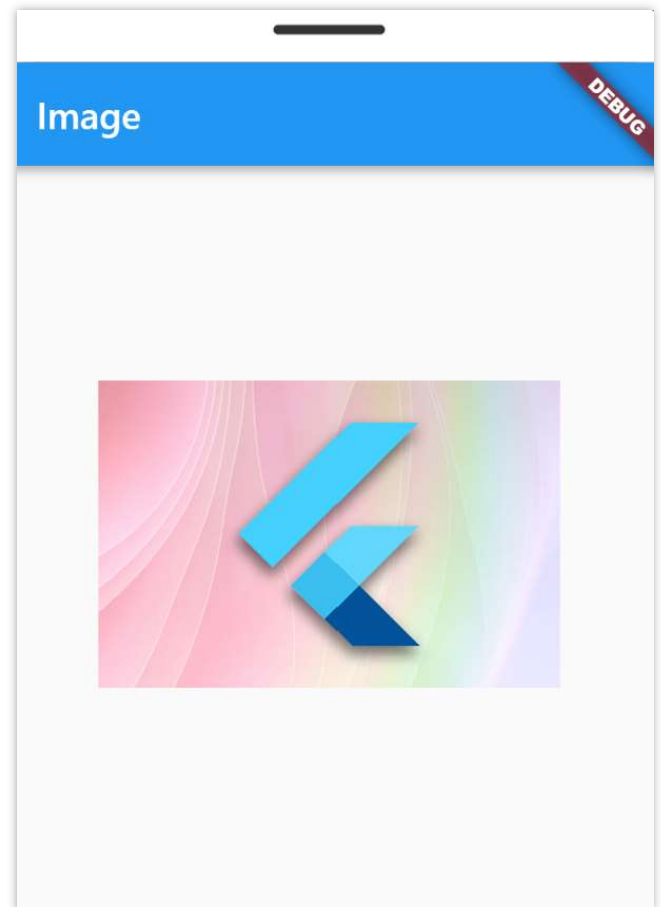

Code:

```
import 'package:flutter/material.dart';

void main() => runApp(MyApp());

class MyApp extends StatelessWidget {
  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      home: Scaffold(
        appBar: AppBar( title: Text(' Image ')),
        body: Center( child: Column(
          children: <Widget>[
            Image.network(
              'https://blog.logrocket.com/wp-content/uploads/2021/04/Building-Flutter-desktop-app-tutorial-examples.png',
              height: 400,
              width: 250),
          ],
        )),
      ));
  }
```

OUTPUT:

Q8. Write a program to display screens using Navigation in flutter App.

Code:

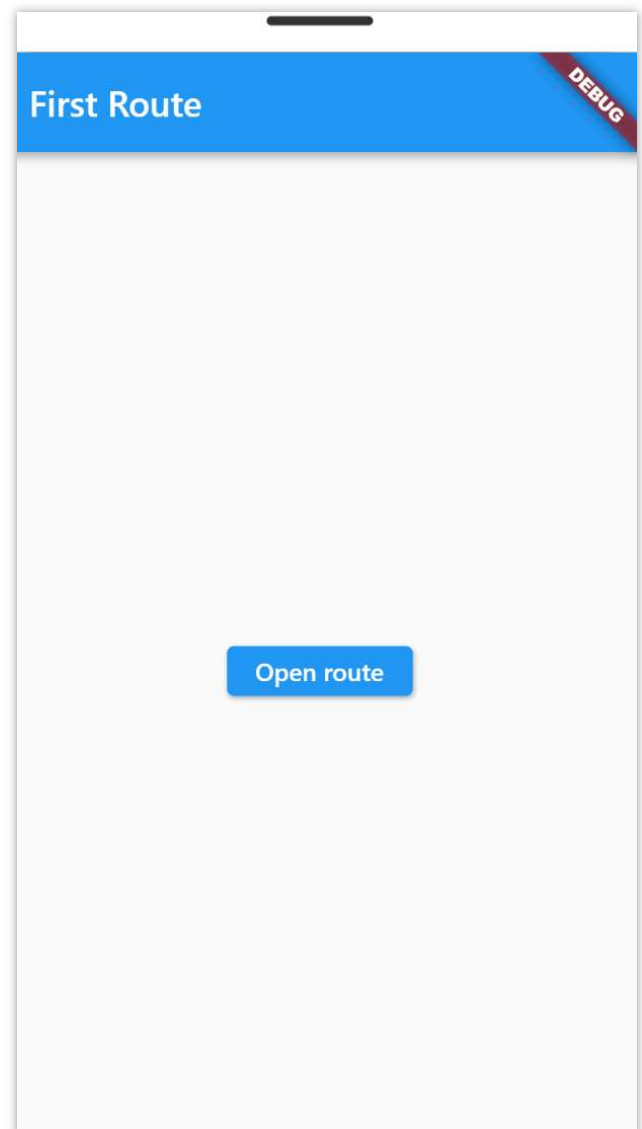

```
import 'package:flutter/material.dart';

void main() {

  runApp(MaterialApp(
    title: 'Navigation Basics',
    home: FirstRoute(),
  ));
}

class FirstRoute extends StatelessWidget {
  @override
  Widget build(BuildContext context) {
    return Scaffold(
      appBar: AppBar(
        title: Text('First Route'),
      ),
      body: Center(
        child: ElevatedButton(
          child: Text('Open route'),
          onPressed: () {
            Navigator.push(
```

OUTPUT:

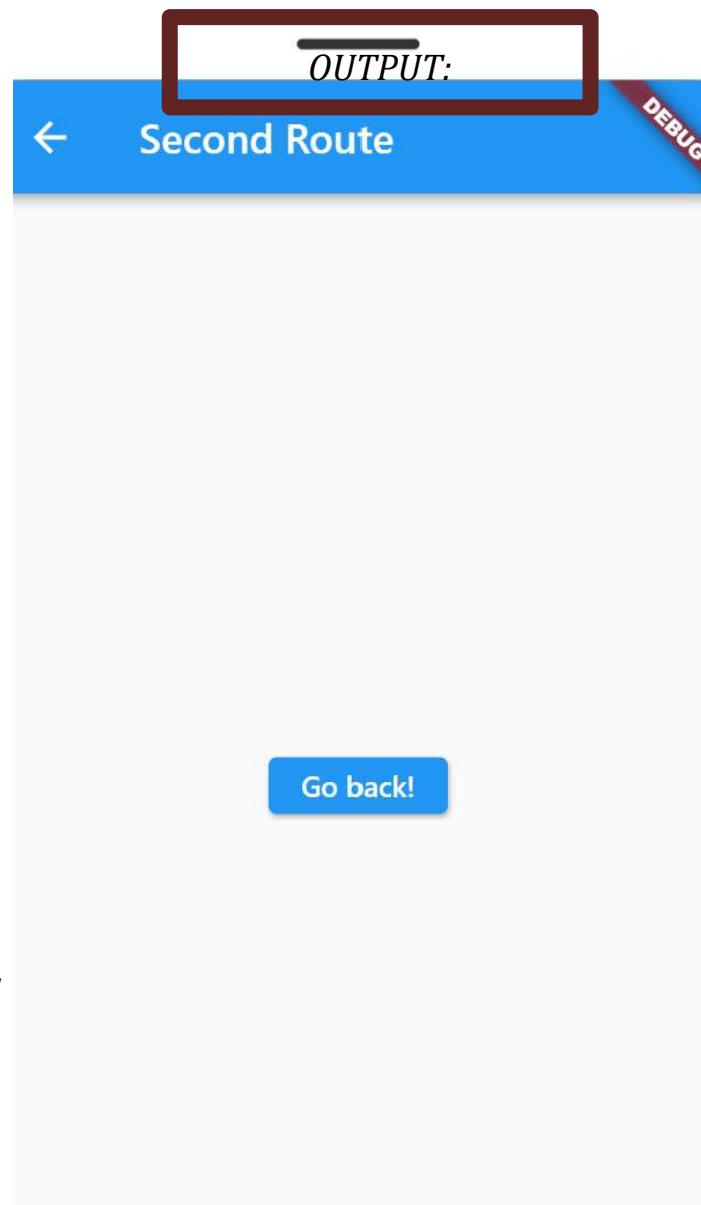

```

        context,
        MaterialPageRoute(builder: (context) => SecondRoute()),
    );
  },
);
}
}

class SecondRoute extends StatelessWidget {
  @override
  Widget build(BuildContext context) {
    return Scaffold(
      appBar: AppBar(
        title: Text('Second Route'),
      ),
      body: Center(
        child: ElevatedButton(
          onPressed: () { Navigator.pop(context); },
          child: Text('Go back!'),
        ),
      ),
    );
  }
}

```

Q9 Write a program to display Scrollview in flutter App.

Code:

```
import 'package:flutter/material.dart';

void main() => runApp(MyApp());

class MyApp extends StatelessWidget {
  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      title: 'Flutter Demo',
      debugShowCheckedModeBanner: false,
      theme: ThemeData(
        primarySwatch: Colors.blue,
      ),
      home: MyHomePage(),
    );
  }
}

class MyHomePage extends StatefulWidget {
  @override
  _MyHomePageState createState() => _MyHomePageState();
}

class _MyHomePageState extends State<MyHomePage> {
  Widget cont(Color color) {
    return Container(
```

```
height: 200,  
width: 200,  
color: color,  
);}
```

```
@override
```

```
Widget build(BuildContext context) {  
  return Scaffold(  
    appBar: AppBar( title: Text("Flutter Demo Home Page").),  
    body: Center(  
      child: SingleChildScrollView(  
        child: Column(  
mainAxisAlignment: MainAxisAlignment.center,  
        children: <Widget>[  
          cont(Colors.green),  
          cont(Colors.blue),  
          cont(Colors.orange),  
          cont(Colors.redAccent) ],  
        ),),  
    );}}
```

Q10. Write a program to display Radiobutton in flutter App.

Code:

```
import 'package:flutter/material.dart';

void main() { runApp(MyApp());}

class MyApp extends StatelessWidget {
  @override
  Widget build(BuildContext context) {
    return MaterialApp(home: Home());
  }
}

class Home extends StatefulWidget {
  @override
  State<Home> createState() => _HomeState();
}

class _HomeState extends State<Home> {
  String? gender; //no radio button will be selected
  //String gender = "male";
  //if you want to set default value
  @override
  Widget build(BuildContext context) {

    return Scaffold(
```

```

appBar: AppBar(title: Text("Radio Button in Flutter")),
body: Container(
  padding: EdgeInsets.all(20),
  child: Column(
    children: [
      Text(
        "What is your gender?",
        style: TextStyle(fontSize: 18),
      ),
      Divider(),
      ListTile(
        title: Text("Male"),
        value: "male",
        groupValue: gender,
        onChanged: (value) {
          setState(() {
            gender = value.toString();
          });
        },
      ),
      ListTile(
        title: Text("Female"),

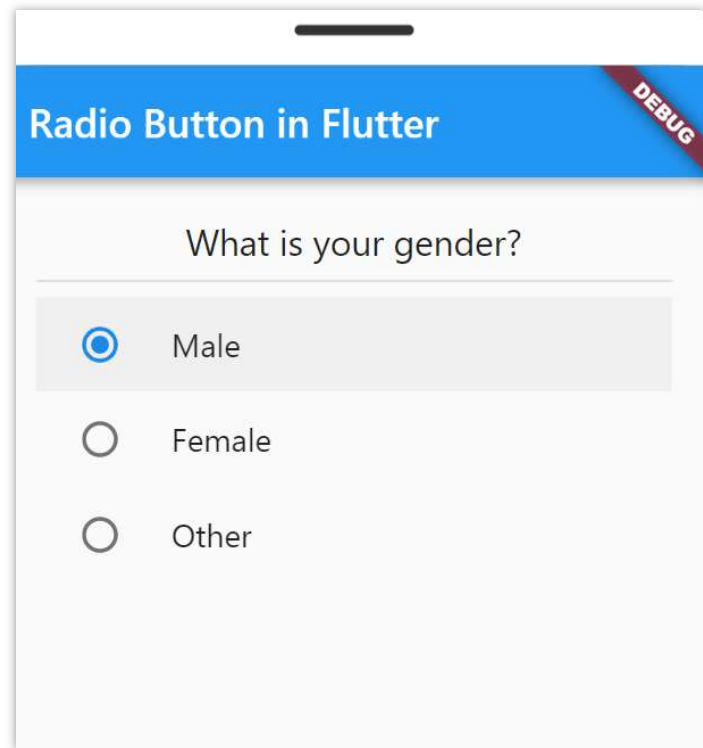

```

OUTPUT:

```

        value: "female",
        groupValue: gender,
        onChanged: (value) {
          setState(() {
            gender = value.toString();
          });
        },
      ),
    RadioListTile(
      title: Text("Other"),
      value: "other",
      groupValue: gender,
      onChanged: (value) {
        setState(() {
          gender = value.toString();
        });
      },
    ),
  ],),
);}}

```

Q11. Write a program to display Icon in flutter App.

Code:

```
import 'package:flutter/material.dart';

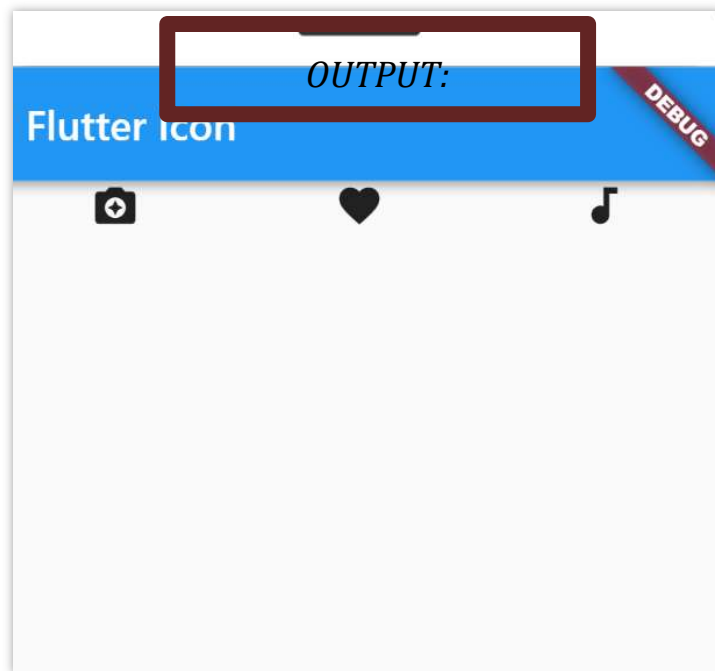

void main() => runApp(MyApp());

class MyApp extends StatelessWidget {
  @override
  Widget build(BuildContext context) {
    return MaterialApp(home: MyIconPage()
);
  }
}

class MyIconPage extends StatefulWidget {
  @override
  _MyIconPageState createState() => _MyIconPageState();
}

class _MyIconPageState extends State<MyIconPage> {
  @override
  Widget build(BuildContext context) {
    return Scaffold(
      appBar: AppBar(
        title: Text('Flutter Icon'),
      ),
    ),
```

```
body: Row(  
  mainAxisAlignment: MainAxisAlignment.spaceAround,  
  children: <Widget>[  
    Icon(Icons.camera_enhance),  
    Icon(Icons.favorite),  
    Icon(Icons.audiotrack),  
  ]),  
);  
}}
```

Q12. Write a program to display different types of button(Flatbutton, Raisedbutton, FloatingActionButton(FAB)) in flutter App.

Code:

```
import 'package:flutter/material.dart';

void main() { runApp(MyApp());}

class MyApp extends StatefulWidget {
  @override
  _MyAppState createState() => _MyAppState();
}

class _MyAppState extends State<MyApp> {
  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      home: Scaffold(
        appBar: AppBar(
          title: Text('Flutter Buttons'),
        ),
        body: Center(
          child: Column(children: <Widget>[
            Container(
              margin: EdgeInsets.all(25),
```

```

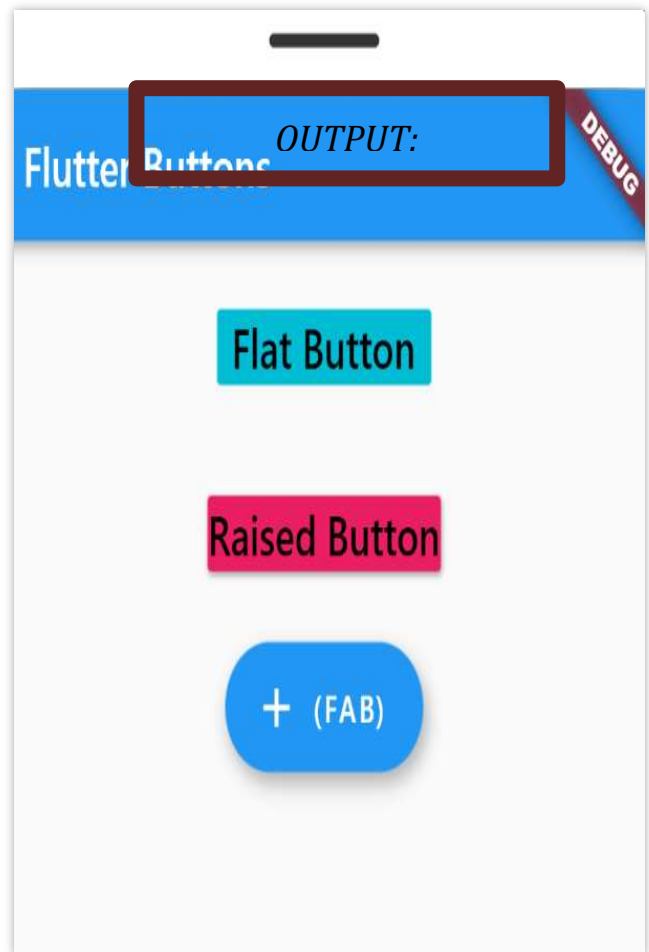

child: FlatButton(
  child: Text(
    'Flat Button',
    style: TextStyle(fontSize: 20.0),
  ),
  color: Colors.cyan,
  textColor: Colors.black,
  onPressed: () {},
),
),
Divider(),
Container(
  child: RaisedButton(
    child: Text(
      'Raised Button',
      style: TextStyle(fontSize: 20),
    ),
    onPressed: () {},
    color: Colors.pink,
    textColor: Colors.black,
    padding: EdgeInsets.all(8.0),

```

```

    ),
  ),
  Divider(),
  Container(
    margin: EdgeInsets.all(10),
    child: FloatingActionButton.extended(
      onPressed: () {},
      icon: Icon(Icons.add),
      label: Text('(FAB)'),
    ),
  ),
  Container(),
  ]))),
);
}

```

Q13. Write a program to display List of items using menu in flutter App.

Code:

```
import 'package:flutter/material.dart';

void main() { runApp(MyApp());}

class MyApp extends StatelessWidget {
  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      home: MyHomePage(),
    );}}

class MyHomePage extends StatefulWidget {
  @override
  _MyHomePageState createState() => _MyHomePageState();
}

class _MyHomePageState extends State<MyHomePage> {
  // Initial Selected Value
  String dropdownvalue = 'Item 1';
  // List of items in our dropdown menu
  var items = [
    'Item 1',
    'Item 2',
```

OUTPUT:

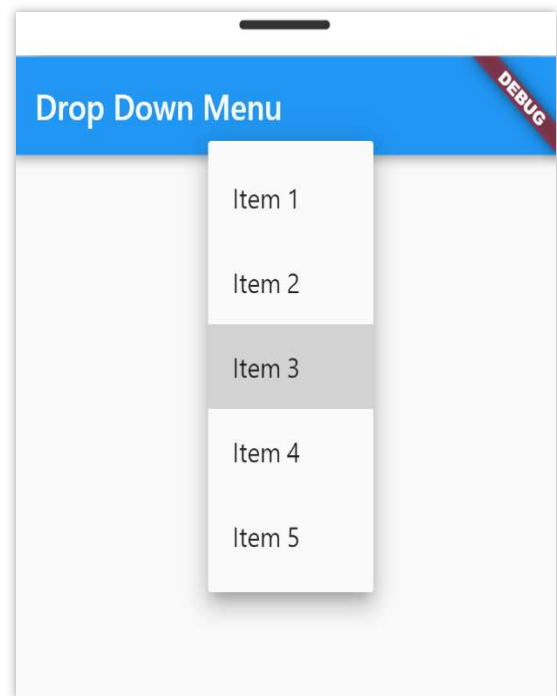

```
'Item 3',  
'Item 4',  
'Item 5',  
];  
  
@override  
Widget build(BuildContext context) {  
  return Scaffold(  
    appBar: AppBar(  
      title: Text("Drop Down Menu"),  
    ),  
    body: Center(  
      child: Column(  
        children: [  
          DropdownButton(  
            // Initial Value  
            value: dropdownvalue,  
  
            // Down Arrow Icon  
            icon: Icon(Icons.keyboard_arrow_down),  
  
            // Array list of items  
            items: items.map((String items) {
```

```

return DropdownMenuItem(
  value: items,
  child: Text(items),
);
}).toList(),
// After selecting the desired option,it will
// change button value to selected value
onChanged: (String? newValue) {
  setState(() {
    dropdownvalue = newValue!;
  });
},
),
],
),.
);}}

```

Q14. Write a program to display Login Screen in flutter App.

Code:

```
import 'package:flutter/material.dart';

void main() {runApp(MyApp());}

class MyApp extends StatelessWidget {
  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      home: LoginDemo(),
    );}}

class LoginDemo extends StatefulWidget {
  @override
  _LoginDemoState createState() => _LoginDemoState();
}

class _LoginDemoState extends State<LoginDemo> {
  @override
  Widget build(BuildContext context) {
    return Scaffold(
      appBar: AppBar(
        title: Text("Login Page"),
      ),
    );
  }
}
```

```

body: Center(
  child: Column(
    children: <Widget>[
      Padding(
        padding: EdgeInsets.only(top: 60.0),
        child: Container(
          child: Text(
            'Flutter Login',
            style: TextStyle(fontSize: 30),
          ),
        ),
      ),
      Padding(
        padding: EdgeInsets.symmetric(horizontal: 15),
        child: TextField(
          decoration: InputDecoration(
            border: OutlineInputBorder(),
            labelText: 'Email',
            hintText: 'Enter valid email id as abc@gmail.com'),
          ),
        ),
      Padding(
        padding:

```

```

    EdgeInsets.only(left: 15.0, right: 15.0, top: 15, bottom: 0),
    //padding: EdgeInsets.symmetric(horizontal: 15),
    child: TextField(
      obscureText: true,
      decoration: InputDecoration(
        border: OutlineInputBorder(),
        labelText: 'Password',
        hintText: 'Enter secure password'),
    ), ),
FlatButton(
  onPressed: () { //TODO FORGOT PASSWORD SCREEN GOES HERE },
  child: Text(
    'Forgot Password',
    style: TextStyle(color: Colors.blue, fontSize: 15),
  ), ),
Container(
  height: 50,
  width: 250,
  decoration: BoxDecoration(
    color: Colors.blue, borderRadius: BorderRadius.circular(20)),
  child: FlatButton(

```

```

onPressed: () {},
child: Text('Login',
  style: TextStyle(color: Colors.white, fontSize: 25),
),
),
),
Text('New User? Create Account')
],
),
),
);
}
}

```

Q15. Write a program to display Animation in flutter App.

Code:

```
import 'package:flutter/material.dart';

void main() => runApp(MyApp());

class MyApp extends StatelessWidget {
  // This widget is the root of your application.

  @override
  Widget build(BuildContext context) {
    return MaterialApp(
      title: 'Flutter Animation',
      home: ButtonFade(),
    );
  }
}

class ButtonFade extends StatefulWidget {
  @override
  createState() => ButtonFadeState();
}

class ButtonFadeState extends State<ButtonFade> {
  double opacityLevel = 1.0;

  @override
  Widget build(BuildContext context) {
    return Column(
```

OUTPUT:

```

mainAxisAlignment: MainAxisAlignment.center,
children: [
  AnimatedOpacity(
    opacity: opacityLevel,
    duration: Duration(seconds: 10),
    child: ElevatedButton(
      child: Text('fade me'),
      onPressed: () {
        setState(() => opacityLevel = opacityLevel == 0 ? 1.0 : 0.0);
      },
    ),
  ),
],
);
}
}

```
